Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 20-29 are drawn to control of data admission to the network, classified in class 370, subclass 230.
 - II. Claims 30-35 are drawn to in a ring system, classified in class 370, subclass 258.
 - III. Claims 36-42 are drawn to multiple levels of multiplexing, classified in class 370, subclass 539.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I is concerned with a connection admission control method; invention II is concerned with a connection control method for a ring-type communication system; while invention III is concerned with a device for a communication system having add drop processing structures. See MPEP § 806.05(d).
3. Because these invention are distinct for the reason given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purpose as indicated is proper.

for examination purpose as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
